

Connect Digital Infrastructure at Software Speed

Scale hybrid deployments, achieve network agility, directly connect to partners and providers easily and securely.

How digital business connects

Bring your distributed infrastructure together and interconnect seamlessly with thousands of customers, partners and top-tier networking, storage, compute and application service providers worldwide using Equinix Fabric.

The on-demand, software-defined interconnections that Equinix Fabric enables across Platform Equinix® power your success forward by increasing the security, speed, flexibility and agility of your entire digital infrastructure. Directly and securely connect across the world's largest infrastructure ecosystem in minutes with Equinix Fabric, available in 45+ metros on five continents.

Benefits

Reach

Discover thousands of customers, partners and services to connect to across 45+ global platform metros.

Speed

Create direct connections in minutes with automated provisioning and adjust as needs change.

Ease

Simplify with a repeatable way to connect to clouds, networks and your own infrastructure.

Performance

Reduce latency and improve application performance via a purpose-built Layer 2 network.

Security

Bypass the public internet, reduce attack surface and minimize security threats.

Discover and reach anyone on demand through a single portal and APIs, within a metro or globally.

Optimize your infrastructure

Network optimization

Localize and optimize traffic by integrating infrastructure, service providers and security across metros for faster provisioning and better performance.

Hybrid multicloud

Simplify your IT by directly connecting to multiple clouds and securing last-mile access from a single port that unlocks on-demand access to top cloud and network providers.

Business agility

Respond to business needs in real time by utilizing reliable, flexible and pay-as-you-go connectivity to your own physical or virtual infrastructure across our global network.

Application exchange

Get efficient, on-demand connectivity and dynamic control of data and application traffic flows by expanding your digital ecosystem using programmable, software-defined interconnection.

Technical Specifications

Equinix Fabric port

- 1 Gbps or 10 Gbps ports available.
- Includes cross-connect cable from customer cage to Equinix Fabric port

Connection speed

- Right-size connection speeds as demands shift and spin up/down in real time
- Bandwidth tiers from 50 Mbps to 10 Gbps

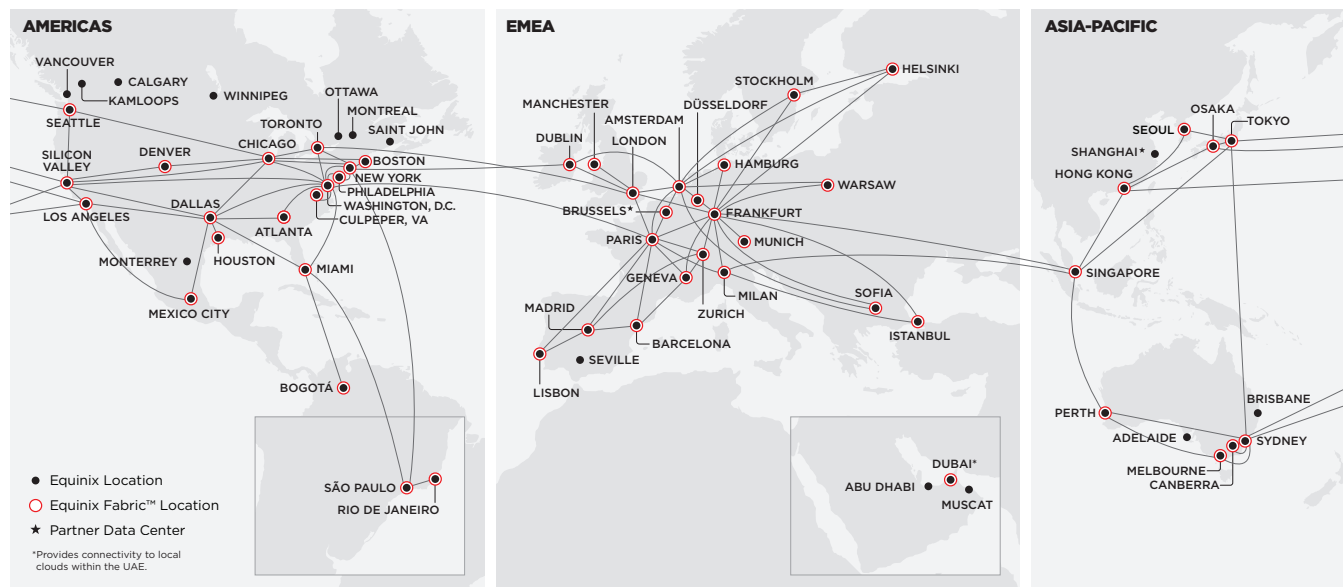

Connection options

- Interconnect to any provider, partner or customer within a metro or globally on Platform Equinix
- Layer 2 and Layer 3 configuration options

Availability SLA

- 99.999% (dual ports)
- 99.9% (single port)

Availability
