

ACCELERATE YOUR DIGITAL JOURNEY

Driving Accenture hybrid cloud and WAN optimization with Equinix

Together, Accenture and Equinix enable private, high-speed connectivity to multiple cloud providers with direct, secure, low-latency access. Planning and managing the migration of workloads and IoT data to multiple clouds, we enable and maintain cloud consumption rebates.

You gain the multicloud benefits of lower IT costs, faster time to market and rapid innovation that support large scale-up, mission-critical workloads. You can also be sure of data sovereignty, cost-efficiency, network optimization, edge computing and cloud adjacency.

The challenges you face

Multicloud connectivity between the edge and IoT

How can you connect your network to multiple public clouds and IoT devices securely and at scale, while enabling analytics at the edge to control security and performance?

Achieving WAN transformation

With network complexity increasing as the enterprise grows and more locations are added to a WAN, how can you ensure reliable, high-speed connectivity between multiple locations?

Ensuring business continuity

How can you ensure robust disaster recovery without building fully redundant data center infrastructure or risking inadequate connectivity to disaster recovery sites?

Improving remote user QoE

How can you provide a scalable, consistent, high-quality experience to widely distributed ecosystems of partners, customers and suppliers, enabling new offerings and home working?

The key benefits of our joint solution

Flexible, agile and cost-effective hybrid multicloud connectivity

We enable private, direct, secure, low-latency, high-speed connectivity to multiple cloud providers—including all major public cloud platforms—via a single port.

Global WAN architecture optimization

We enable the transition from complex, meshed network architectures to simplified, flatter networks with better performance, eliminating costly WAN routes and network choke points.

Highly secure and available infrastructure with geographic flexibility

We provide disaster recovery plans and redundant infrastructure. High-speed links within metros minimize user disruption and enable geographically distributed computing environments.

Enhanced user experiences and latency

Our global interconnection services enable fast, direct connectivity to cloud platforms and services, with multiple data center networks locating resources closer to users.

Multicloud benefits that support large scale-up, mission-critical workloads

Our leading capabilities that enable your success

Hybrid edge, multicloud architecture design and deployment

Gain exponential scale of access and performance through proximity between your users, devices and services at metro/country level—globally—based on workload analysis techniques. We identify connectivity strategies that meet the most demanding digital transformation agendas, and unlock use cases across different markets and economies.

Software-defined data, network and cloud security

We deliver WAN optimization and hybrid cloud networking across multiple partners, including VMware NSX, Arista, Palo Alto, Juniper, Cisco, ViPTela, and Nuage. We secure and protect hybrid cloud workloads through collaborative partnerships with secure web gateway providers, including Zscaler, Netskope and Symantec, as well as privately connecting between clouds, service providers and your ecosystem.

Global reach with Platform Equinix®

Platform Equinix is the global platform for digital business integration and connection, providing an infrastructure built for distributed scale and security. Directly connecting your digital business physically and virtually around the world, Platform Equinix hosts an advanced portfolio of digital services and ecosystems so that you can securely scale your digital infrastructure, wherever opportunity leads.

Equinix Fabric™

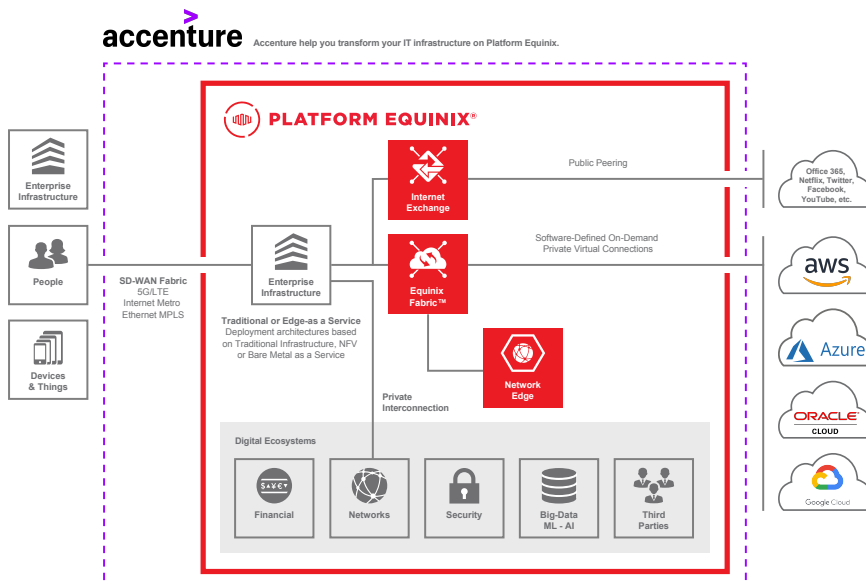

Equinix Fabric connects distributed infrastructure and digital ecosystems on Platform Equinix via global, software-defined interconnections. Available across 35+ locations, it is designed for scalability, agility and connectivity over a self-service portal or API. Through a single port, discover and reach anyone on demand, locally or across metros, to drive your digital future forward.

About Accenture

Accenture is a global professional services company with leading capabilities in digital, cloud and security. Combining unmatched experience and specialized skills across more than 40 industries, we offer Strategy and Consulting, Interactive, Technology and Operations services—all powered by the world's largest network of Advanced Technology and Intelligent Operations centers.

About Equinix

Equinix is the world's digital infrastructure company. Digital leaders harness our trusted platform to bring together and interconnect the foundational infrastructure that powers their success. We enable our customers to access all the right places, partners and possibilities they need to accelerate advantage. With Equinix, they can scale with agility, speed the launch of digital services, deliver world-class experiences and multiply their value.
