

# INFRASTRUCTURE SERVICES DATA CENTER EQUIPMENT INSTALLATION

Data center installation is a complex process that requires unique skills that can only be acquired through years of experience. Equinix has installed more than 100,000 cabinets globally. Let Equinix simplify your move.

Equinix provides services to assist in configuring your data center environment. We can project manage the installation, provide professional structured cabling, rack and stack your equipment in the cabinets, install all power strips/PDUs, cabinets, ladder rack, fiber tray and security systems.

## Simple, Professional, Fast

With Equinix's fast, professional project management, you'll have a data center professional organizing the entire process.

- Equipment installation performed in parallel with cage build-out
- Project management provided for shipping, security and logistics
- Turnkey delivery on a single invoice saves time and money

## Future-Proof

Because Equinix understands trends in technology, we can recommend solutions (e.g. cable types, expansion patch panels) to accommodate the greatest amount of flexibility for long-term growth. Our solutions address future issues, such as moves, additions, and changes, and ensure that your infrastructure at Equinix works seamlessly today and tomorrow.

- Best-of-breed technologies
- Design services that can enhance the overall performance of your data center
- Future-proof environments that anticipate trends and changing technologies and equipment

## Global Capability and Consistency Provides Operational Simplicity

With more than 100 International Business Exchange™ (IBX®) data centers, Equinix is the largest retail colocation provider in the world. Our operations teams can ensure a speedy installation and global design support. This is to ensure that each site has the same configuration, speeding operational support and reducing complexity.

## Most Outages Are Caused by Poor Cabling

Proper cabling can prevent many problems in the data center. Equinix Structured Cabling provides advice on cable management and expert installation of cabling infrastructure, including detailed inventory and proper labeling. So when work is performed, it reduces the chance of un-plugging the wrong cable causing unwanted downtime. As with all installation services, Equinix coordinates the entire process, which simplifies the overall deployment.

## Colocation Design and Optimization

Equinix Services will help a customer design a cage layout that optimizes space, plans for future needs, and ensures ease of access for service.

## Lower TCO

Properly planned professional installation can save money over the long run, resulting in lower total cost of ownership (TCO). Equipment life, ongoing maintenance and downtime can all be improved by the initial installation. A well-planned installation can pay for itself in a few short years.
